

Have you ever seen this animal?

Where does it live?

What does it eat?

Can it swim?

Can it fly?

Yes, I have seen this animal in books or on the TV.

It lives in Australia.

It is a carnivore and it eats insect larvae and worms,shrimp,...

Yes, it can swim very well.

No, it can't fly.

Does it lay eggs?

Does it breed its eggs?

Where can we collocate it in our tree diagram?

What is it – a mammal?
a bird?

How can we show effectively information about the platypus in a visual organiser?

Yes, it lays eggs.

Yes, it “breeds” its eggs. The mother curls around the eggs.

We can collocate it in the category of the mammals.

It is a mammal.

We can make a Venn diagramm (mammals, birds, reptiles) and the platypus goes into the intersection.

Mammal Characteristics

- All mammals are warm blooded.
- Most young are born alive.
- They have hair or fur on their bodies.
- Every mammal is a vertebrate.
- All mammals have lungs to breathe air.
- Mammals feed milk to their babies.

Circle only the mammals you can find in the picture below!
